## Production

### Sound

The Gary Dunes Band has put together a state of the art sound system that not only gives clarity to the music, it gives us the power to produce an “arena” sound. Big, NOT loud is the bands' goal. We want you to enjoy the experience, not be blasted away by it. We use JBL bass cabinets for a very solid low end combined with JBL full range cabinets that were specifically designed for a sweet, clean sound powered by Crown amps. This is a critical part of any band and if the sound system is in the least way inadequate, then the whole thing goes south real quick. We have all the toys and goodies to make our sound complete and we're sure that you will agree when you hear it.

### Lighting

John "The Passion Man" uses top of the line equipment to ensure the very best visual experience. Imagine beams of light shining through fog, surrounded by lights that move in all directions and create all sorts of different designs and patterns. Combine that with special effects and color changing lights that in a blink of an eye can change to different colors...and you've got one BIG time light show.

### Staging

The Gary Dunes Band also has a complete stage setup and uses extra crew members to set up the show so not only does the band sound and look great, the staging gives that extra look of a concert, something so overlooked by so many bands. Sure this all adds up to extra work for us, but total integrity is the driving force behind the vision of the Gary Dunes Band. We want to present a complete show that stimulates all the senses and when people leave one of our shows, they can't stop talking about it.
